[Report Apr-Nov Rel100Norm.png](#)

Dear [REDACTED]

thanks for the data!

We updated our statistics and attached it (figures are relative to total accidents compared to 2013 and normed to 100%).

The graph for September and October for sure don't look good - but we know, that on the few spots, where most of the accidents happened the devices were not in working condition - and we know how to improve.

If we take the figures for this months it looks good again - so we have an reduction of 50% again.

More of the (old "energy-problematic") devices will come out of energy-save mode - because the trees lost most of their leaves by now and the "dark places" become brighter again.

But we know, the typical efficiency of the system is higher!

So we'd really like to have replaced the missing/damaged devices and rework the accident hot-spots to improve the results.

We think it would be a good time to have a meeting to plan to rework of the track. In first step we could do this via Skype.

There we could conclude the next steps to take.

When is the best time for you to do this?

It would be nice if this can be done before January - normally in January and February the accidents go up again (at least here in Austria).

OK, please give feedback!

Best regards

Betreff: Wildlife collisions november 2016

Dear Mr. Schalk,

Here are the accidents for november 2016. The exact locations can be found on the images ( Purple = red deer, orange = wild boar, red = roe deer, white = badger )

N795 2 roe deer (17/11, 26/11) , 1 red deer (25/11), 3 wild boar (3/11, 20/11, 23/11)

N302 0 accidents

N787 0 accidents

compared to 2013

N795 1 red deer, 1 wild boar

N302 2 wild boar, 1 red deer

N787 1 red deer

total 138 accidents in november 2013, 183 in november 2016

The work on the N302 wil finish on friday the 9th.

Regards,

[REDACTED]
