Zie bijlage. [REDACTED] denkt dat een aantal palen van het virtuele raster vernield zijn tijdens het maaien, er schijnen hele happen uit de kunststof palen te zijn. Hebben jullie dit ook gezien en bij de maaier verhaald?

Er zijn ook wat apparaten gedemonteerd, ik heb geen idee wie en waarom. Jullie wel?

Groeten,
[REDACTED]

Dear [REDACTED]

find attached the report based on the examinations, we did in week 41.
Please comment on that, thank you!

Best regards,
[REDACTED]

Betreff: AW: Wildlife collisions september 2016

Dear [REDACTED]

thank you for providing us with the numbers of the last September.
It was really a surprise for us that the numbers especially for the N795 for this month are not good.

Immediately after receiving your mail we had an internal meeting. We take this very serious and defined an action-plan how to proceed with this result.
Last week we examined some of the "hot-spots" on the N302 and N795 and we have important results.
One important thing is, that on "accident hot-spots" there are several devices in a row that are missing.

We have not finished our report yet but as soon as we have finished it (latest beginning of the next week) we will send you all the details.

Best regards
[REDACTED]

Betreff: Wildlife collisions september 2016

Dear [REDACTED]

Here are the accidents for september 2016. The exact locations can be found on the images (Purple = red deer, orange = wild boar, red = roe deer, white = badger)

N795 2 red deer, 5 roe deer, 3 wild boar, 1 fox
N302 4 red deer, 1 badger
N787 0

compaired to 2013

N795 1 roe deer, 1 wild boar, 1 pine marten
N302 2 red deer, 1 roe deer
N797 0

total 108 accidents in september 2013, 146 in september 2016

I am afraid the system did not function very well in september, even though there have been approx. 150% more accidents in total the accidents on the roads with the deer deter have increased 200% in stead of staying on the same level or decreasing.
