Dear members of the European Commission,

On Monday 4 September 2023 you invited interested parties to submit scientific data on the wolf populations in the EU. This consultation is part of the in-depth analysis of all available scientific and technical data, and all other relevant circumstances at hand that the Commission is carrying out as announced in Commission response to the European Parliament non-legislative resolution of 24 November 2022.

Yesterday, on behalf of the province of Gelderland, Harold Zoet, Provincial-Executive representative for agriculture, nature and nitrogen, presented our report in Brussels. Today we present you the same report in a digital format. The report refers to a lot of background information. This is often available in the Dutch language. If you want further explanation or translation of specific parts, please let us know and contact me.

The file is attached to this email and can also be found on our website: [De wolf in Gelderland](#)

On behalf of the Executive Board of Gelderland,
